HPV Vaccination Resources

As part of our 2023 care quality incentives, WellSense is seeking to improve the rates of human papilloma virus (HPV) vaccination in adolescents before their 13th birthday. To help you participate in advancing this goal for member health, WellSense is sharing the following provider resources:

- [CDC HPV resources](#) for providers
- Video: [Dr. Alix Casler Describes How She Recommends HPV Vaccine](#)

As a best practice, we recommend bundling the HPV vaccination alongside all recommended vaccinations in the same visit and utilizing the annual well child visit as appropriate for that purpose.

Your provider-led efforts will be supported by WellSense's own. For example, we've launched a texting campaign to parents/guardians of our eligible members. Our texts include education information about the importance of HPV vaccination, including a link to [this educational video](#).
