Carelon Behavioral Health Revises Provider Toolkit

The Carelon Behavioral Health, our community partner for behavior health services, has recently released a newly revised edition of its [Provider Toolkit](#).

The Toolkit is intended to support primary care clinicians and behavioral health providers as a quick guide to behavioral health references. It includes:

- Guidance for managing populations with co-occurring disorders
- Practical resources for delivering an integrated healthcare approach encouraging whole person health
- Specific resources for the management of a variety of behavioral health diagnoses
- Additional information on a variety of other topics, including coordination of care, COVID-19, behavioral health medications, and social determinants of health.
